

Project Proposal – Mohawk Course Info

Overview

Proposal for the Mohawk Course Info and Review App (Rate My Mohawk). The Rate My Mohawk app provides students with a way of accessing the Mohawk Course database to help them with their course selection process. Through this app, students at Mohawk College can have a look at all the courses and their information such as start date, course description and the course owner. This will be presented in a section of the Navigation Drawer as well as the main page of the app. Users on this main page can click into a course provided by list view which will open a dialog fragment to display further information regarding the course. In the next navigation drawer section, users can also rate the course and give feedback and comments for the course. These comments will be stored in the SQLite Database which will allow users to see old feedback. Course information can be expanded through tapping the more info button which will open a Dialog Fragment containing the rest of the course information. There are three main activity layouts for this app which are the course list view, the feedback input form, and the list of reviews. Lastly, texting the course code will cause the app to open a dialog fragment of the specified course. This app is made for students who are choosing their courses for the upcoming school term and want to look at the course descriptions as well as any comments that other students may have on the course.

API breadth requirement plan and activity layout

- This app will use the Mohawk Course Browser API
- The three activities are the course list view, the feedback form, and the reviews list view
- This app will use SQLite Database, Navigation Drawer, Dialog Fragment and List View
